Applin. No. 10/667,650 Anny. Dekt. No. 14846-23

Amendments to the Claus:

The following listing of claims replaces all prior versions, and listings, of claims in the present application.

Listing of the Claims:

I (contently anicoloid) A method for representing a relational database table as a object in an object-oriented operating system examining

providing a reference to a primary key having a one-to-one mapping to a table critry in said relational database:

overloading the load method in the object-oriented operating system to load a latest instance of a table entry; and

overloading a save method in the object oriented operating system to save an instance of a table entry and

overloading a remove method in the object-oriented operating system to remove an instance of a nable entry

wherein overloading are novements and in the object-oriented operating system namoves itself and any child instances:

wherein overloading a save method in the object oriented operating system saves itself and any child instances; and

wherein overloading a load method in the object-oriented operating system loads itself and any child instruces

- 6. (original): A method in accordance with claim 1 further comprising:
- defining meta data relationship classes to define the relationship between a database type and its equivalent object or ented data type.
 - 7. (original) A method in accordance with claim I further comprising:

19739922853

providing a read data reference to convent data types from object-oriented data types to relational database data types.

- 8. (original) A method in accordance with claim 1 further comprising providing a write that a reference to map data from object-oriented data to relational database data
- 9. (original) A method in accordance with claim 1 further comprising: providing a read type converter reference to convert data types from relational database data types to object oneuted that types.
- 10 (original) A method in accordance with claim 1 further comprising: providing a value added write data reference to convert data from relational database data to object-oriented data.
 - 11. (original) A method in accordance with claim 1 further comprising automatically generating Java code from a data source.
 - 12 (original) A method in accordance with claim 1 further comprising: automatically generating Java code from database meta data.
 - 13. (corporal) A method in accordance with claim I further comprising: automatically generating Java code from DDL.
- 14 (original) A method in accordance with claim 1 further comprising: allowing render-specific SQL hints to be added to generated code to improve performance.
- 15 (original) A method in accordance with claim 1 wherein generated code is independent of a specific 12FF technology, database, external service and third-party products.
 - 16 (original) A method in accordance with claim I further comprising: allowing incremental loading.
